Avast Premium Business Security combines our award-winning endpoint protection with VPN and privacy tools to help your employees stay private and safe online.

The premium online protection and privacy your employees deserve

Device protection
Wherever your employees are and whatever they’re doing online, we keep their devices safe. Our award-winning technology blocks dangerous websites, ensures all files and emails are malware-free, prevents hackers from accessing your device, and more.

Data protection
Avast keeps your business, customer, and personal data safe. Our firewall and network inspection tools block attempted intrusions by hackers and prevent sensitive data from leaving your employee’s PCs.

Privacy protection
Give your employees the privacy and security they need so that they can stay productive, no matter where they’re working from.

Flexible management options
Protect your business and sensitive data in minutes. Easily set up your device protection from our online management platform or install it independently on each device.

48 million
Avast prevents over 48 million cyberattacks daily

300 million
Each month, Avast protects users from 300 million visits to malicious sites

400 million+
Avast protects over 400 million users

1.5 billion+
Avast blocks an average of over 1.5 billion malware attacks per month

33 million+
on average, Avast blocks over 33 million phishing attacks each month

3 million
Each month, Avast blocks an average of 3 million unique phishing URLs

4 million+
Avast blocks an average of over 4 million ransomware attacks per month
Features

Antivirus Protection

**File Shield**
Scans programs and files saved on your PC for malicious threats in real-time before allowing them to be opened, run, modified, or saved. If malware is detected, File Shield prevents the program or file from infecting your PC.

**Web Shield**
Scans data that is transferred when you browse the internet in real-time to prevent malware, such as malicious scripts, from being downloaded and run on your PC.

**Mail Shield**
Scans your incoming and outgoing email messages in real-time for malicious content such as viruses. Scanning only applies to messages sent or received using a mail management software (email clients such as Microsoft Outlook or Mozilla Thunderbird). If you access your web-based email account via an internet browser, your PC is protected by other Avast shields.

**Behavior Shield**
Monitors all processes on your PC in real-time for suspicious behavior that may indicate the presence of malicious code. Behavior Shield works by detecting and blocking suspicious files based on their similarity to other known threats, even if the files are not yet added to the virus definitions database.

**CyberCapture**
Detects and analyzes rare, suspicious files. If you attempt to run such a file, CyberCapture locks the file from your PC and sends it to the Avast Threat Lab where it is analyzed in a safe, virtual environment.

**Firewall**
Monitors all network traffic between your PC and the outside world to protect you from unauthorized communication and intrusions. Firewall can prevent sensitive data from leaving your PC and can block attempted intrusions by hackers.

**SmartScan**
Scans for malware, outdated applications, unsafe settings, and suspicious add-ons.

**Sandbox**
Allows you to browse the web or run an application in a completely isolated, safe environment. When you run an application in Sandbox, your activity and web content is contained, which prevents damage to your PC. This is useful when you want to run suspicious or untrusted applications without risk.
Network Inspector
Scans your network for vulnerabilities and identifies potential security issues that open the door to threats. This feature checks the status of your network, devices connected to the network, and router settings. Wi-Fi Inspector helps you secure your network to prevent attackers from accessing it and misusing your personal data.

Real Site
Secures you against DNS (Domain Name System) hijacking. Some malicious programs can redirect you from an authentic URL to an inauthentic one to acquire sensitive information such as usernames, passwords, and credit card details.

Rescue Disk
Enables you to scan your PC when your system is not running. This method significantly increases your chances of detecting and removing malware because the malware is unable to counteract. If you suspect your PC is infected with malware and all other antivirus scans were unable to resolve the issue, you can use Rescue Disk.

Data Protection

Data Shredder
Allows you to irreversibly erase your files or drives so that there is no way for anyone to restore and misuse your data.

Exchange Server Protection
Scans and filters emails at the Exchange server level – stopping potential attacks before they spread to the network.

Security Browser Extension
Scans sites for authenticity and blocks malicious ads.

Remote Access Shield
Prevents Remote Desktop Protocol (RDP) exploits and brute-force attacks by allowing you to choose who can remotely access your computer and block unwanted connections.

Ransomware Shield
Secures your personal photos, documents, and other files from being modified, deleted, or encrypted by ransomware attacks. This feature enables you to protect your files and folders from untrusted applications and specify which applications have permission to access your protected folders.

SharePoint Server Protection
Checks all files uploaded onto shared storage to ensure malware cannot compromise data.
Identity Protection

Webcam Shield
Prevents applications and malware from accessing your PC’s webcam without your consent. With Webcam Shield enabled, untrusted applications cannot capture images or videos, or send the content outside of your PC to compromise your privacy.

Passwords
Prevents applications and malware from viewing, changing, or deleting passwords that are saved in your Google Chrome, Mozilla Firefox, Microsoft Edge, and Avast Secure Browser browsers.

Privacy Features

VPN
Functions as a private tunnel through the internet that encrypts your data and secures your connection when using public Wi-Fi connections, such as those in cafes or airports. SecureLine VPN has servers in several locations, which means you can bypass geolocation restrictions and access your favorite content while traveling.

Device Control

USB Protection
Prevent employees from using unauthorized removable storage devices including flash drives, external drives, memory cards, etc. Block, control, and monitor USB ports to stop data theft and malware infections.

Flexible device management
Choose the management option that works best for your business.

Unmanaged (individual installation)
Ideal for small offices that do not need management capabilities. Users can adjust device settings according to their preferences and maintain complete control of their data.

Online management platform
Our online management platform, the Avast Business Hub, allows you to easily set up and install your protection, monitor devices, manage your subscriptions, and more from one place — anytime, anywhere. On-premise management not available.
Business Hub (online management platform) features:
- Intuitive dashboard
- Comprehensive reporting
- Device and policy management
- Centralized alerts & notifications
- Real-time commands
- Network Discovery & remote deployment
- Basic Remote Access and support tool
- Multi-tenant support

Integrated Services (available as add-ons in the Business Hub)
- Patch Management
- Premium Remote Control
- Cloud Backup
- Web Control (coming in 2023!)

About Avast Business
Avast delivers easy-to-use, affordable, and award-winning cybersecurity solutions for small and growing businesses. Avast provides integrated security services to protect your devices, data, applications, and networks. Backed by 30 years of innovation, we have one of the largest, most globally dispersed threat detection networks in the world. Our cybersecurity solutions are built to provide maximum protection so that you can worry less about cyberthreats and focus more on growing your business. For more information about our cybersecurity solutions, visit www.avast.com/business.
